Pitch for Wifi Doorbell

• Ever had packages delivered when you’re not home, and they require a signature?

• Call up delivery office to schedule delivery when you are free, but they don’t listen?

• Same line of reasoning, ever have people ringing your doorbell, but you either don’t hear it or aren’t home yet?

• Create a device that activates when doorbell button is pushed
  
  o Alerts a predetermined cell phone number(s) that the doorbell has been pushed
  
  o Option to open a two-way conversation via intercom
  
  o Additional option of camera to take picture (or stream video) of front door

• Since the system is calling your cell number, you can effectively sign off on the delivery, or create additions to this system to develop a method to validate the delivery
